Bug修改记录 11.2

1.18894:建议将LHttpControl的get_byte请求 统一放到get请求中 统一处理

解决:已经将 get_byte 的内容合并到 get 中,并且删除了 get_byte 的方法如下:

```
l.cpp > 😭 get(const LHttpRequest &)
Control .. Attores | HttpPoguest

    ★ LHttpControl(LObject *) LHttpControl

-1;
           dr_in
           base64Encode(const LString &) LHttpControl
dr, s
famil
           get(const LHttpRequest &) LHttpControl
port
           post(const LHttpRequest &, const LString ...
           head(const LHttpRequest &) LHttpControl
  LSt
           put(const LHttpRequest &, const LString &...
  LSt
           deleteResource(const LHttpRequest &) LHt...
t.pat
           readSend() const LHttpControl
path.
 std:
           readRecv() const LHttpControl
dStri
           readStatusCode(LString, LHttpReply *) LHtt...
h.toS
           readData(char []) LHttpControl
```

2.18893: LHttpControl发送get_byte请求失败 抛出异常

• 原因: get_byte 和 get 合并了,所以后续都是使用 get 方法

• 解决: 先看我自己的写的一个程序来请求一张图片

图片url: http://www.baidu.com/img/PCtm d9c8750bed0b3c7d089fa7d55720d6cf.png

我写的程序如下,这个程序能很好的发送一个get请求

```
#include <arpa/inet.h>
#include <netdb.h>
#include <unistd.h>
#include <cstring>
#include <iostream>
#include <string>
int main() {
    std::string send_message = "GET
/img/PCtm_d9c8750bed0b3c7d089fa7d55720d6cf.png HTTP/1.1\r\n";
    send_message += "Host: www.baidu.com\r\n";
    send_message += "Connection: keep-alive\r\n";
    send_message += "User-Agent: Mozilla/5.0\r\n";
    send_message += "Accept-Language: zh-CN,zh;q=0.9,en;q=0.8,en-GB;q=0.7,en-
US;q=0.6\r\n";
    send_message += "\r\n"; // 最后要加上 \r\n
    int connect_fd = socket(AF_INET, SOCK_STREAM, IPPROTO_TCP);
    if (-1 == connect_fd) {
        perror("socket");
        return -1;
   }
    struct hostent *p_hostent = gethostbyname("www.baidu.com");
    struct sockaddr_in server_addr;
    server_addr.sin_family = AF_INET;
    memcpy(&(server_addr.sin_addr), p_hostent->h_addr_list[0],
sizeof(server_addr.sin_addr));
```

```
server_addr.sin_port = htons(80); // 记得要改端口!
   int ret = connect(connect_fd, (struct sockaddr *)&server_addr,
sizeof(server_addr));
   if (-1 == ret) {
        perror("connect");
        return -1;
   }
   send(connect_fd, send_message.c_str(), send_message.size(), 0);
   std::string recv_message;
   char recv_buf[BUFSIZ] = {0};
   while (1) {
        bzero(recv_buf, BUFSIZ);
        int len = recv(connect_fd, recv_buf, BUFSIZ - 1, 0);
        if (-1 == len) {
            perror("recv");
            return -1;
        }
        if (len > 0) {
            recv_message += recv_buf;
            if (len != BUFSIZ - 1)
                break;
        }
   }
   std::cout << recv_message << std::endl</pre>
              << std::endl
              << recv_message.size() << std::endl;</pre>
   close(connect_fd);
   return 0;
}
```

结果如下:

我们先不管响应体格式是怎么样的,第一请求成功了,第二响应头是没问题的,响应体的事情先不考虑

```
lzx0626@DavidingPlus:~/DavidingPlus/Cpp$ make
g++ _test.cpp -o a.out
lzx0626@DavidingPlus:~/DavidingPlus/Cpp$ a.out HTTP/1.1 200 OK
Accept-Ranges: bytes
Cache-Control: max-age=315360000

lzx0626@DavidingPlus:~/DavidingPlus/Cpp$
```

现在再来看 HttpControlTest 的 testGetPic() 的结果,我在 get 请求中做了一次打印 readMessage 的操作:

```
while (1) {
    bzero(readBuffer, buffer_size);
    int len = recv(sockfd, readBuffer, buffer_size, 0);
    if (-1 = len) {
        perror("recv");
        exit(-1);
    }
    std_readMessage += readBuffer;

if (len ≠ buffer_size)
        break;
}
std::cout << std_readMessage << std::endl;</pre>
```

结果如下:

请求成功了,我们先不管响应数据怎么样,就像昨天说的,这是 LString 那边报的错,所以理应来说这个 get 发送的请求是没问题的

```

```

• 后续: 所以 LString 修复之后这里的异常应该就没有了,我也不想为了我这边正确而修改代码的架构设计,不用 LString ,这显然是不合理的,所以这一条bug可以先放在这里,首先 LString 有问题,第二我不知道这样返回的图片资源的数据是否正确,但是统一放到get请求中这一条是做好了的
